EARL JOHN JIMENEZ

Senior QA Automation Engineer | AI-Assisted Testing | Playwright & TypeScript

Metro Manila, Philippines | earljimenez29@gmail.com | linkedin.com/in/earljohn-jimenez

PROFESSIONAL SUMMARY

Senior QA Automation Engineer with 8+ years of experience building automated testing that catches defects before customers do. At Nelnet Philippines, owns test automation for four business applications and leads the team's adoption of AI tools (Claude Code, GitHub Copilot) to deliver faster without lowering quality. Strong record in end-to-end, API and regression testing, CI/CD integration, and mentoring engineers. Open to remote senior QA automation, SDET and consulting roles.

TECHNICAL SKILLS

Test Automation: Playwright, TypeScript, JavaScript, Cucumber (BDD), Robot Framework, Selenium WebDriver, C#, Page Object Model

Testing Types: End-to-End, Regression, API, Accessibility (WCAG), Data Validation, Cross-Browser, Smoke

AI-Assisted QA: Claude Code, GitHub Copilot, AI agents and reusable skills for test authoring, code review and failure triage

CI/CD and Tools: Azure DevOps (Pipelines, Test Plans, Boards), GitHub, Bitbucket, GitHub Actions, Postman, Bruno

Data: SQL Server, test data management

Practices: Agile/Scrum, defect triage, root-cause analysis, mentoring

PROFESSIONAL EXPERIENCE

Senior Software QA Engineer Oct 2023 - Present

Nelnet Philippines Inc. | Metro Manila, Philippines

- Own test automation for four web applications: a construction contract and project-valuation platform, a financial aid and grant management system, a document data-entry and verification tool, and an insurance policyholder portal. Maintain more than 1,000 automated tests, built with Playwright, TypeScript and Cucumber (BDD), covering each application's critical workflows.
- Lead the team's adoption of agentic AI testing, building reusable AI skills and specialized agents for test writing, code review, failure investigation and coverage audits, speeding up delivery while keeping quality standards.
- Set and enforce standards for AI-generated tests, with automated pre-merge reviews, so tests check for correct behavior rather than being adjusted to pass.
- Derive test scenarios from application source code and verify them against the live application before automating, catching requirement gaps early.
- Integrate automated testing into Azure DevOps delivery pipelines across development, test, release and production environments, giving the team fast, readable results on every release.
- Review each release's code changes against the test suite to find untested behavior before it reaches users.
- Verify what users cannot easily see: role-based permissions, report accuracy, accessibility and API behavior, including checks against file exports.
- Investigate failed test runs to identify true root causes (product defect, test issue, environment or deployment), fix timing and data problems at the source rather than re-running failures, log confirmed bugs, and add regression tests so fixed issues stay fixed.
- Mentor QA engineers through training sessions, brown-bag talks and pair programming on responsible use of AI coding assistants.

Senior QA Automation Engineer Aug 2021 - Oct 2023

FLNT | Philippines

- Pioneered test automation for the QA team using Robot Framework with keyword-driven, data-driven and BDD (Gherkin) approaches.
- Automated web UI, API and database testing and ran suites in parallel through Azure Pipelines.
- Managed test cases, user stories and bugs in Azure Test Plans and Boards.

QA Automation Specialist Nov 2019 - Aug 2021

MUSIC Tribe | Philippines

- Introduced the team's first automated test suite (Robot Framework, Selenium) for web and mobile applications, run through GitHub Actions.
- Performed regression, smoke, sanity and functional testing; tracked test cases in TestLink.

Software Quality Assurance Engineer Sep 2018 - Nov 2019

Navitaire, an Amadeus company | Makati, Philippines

- Tested and certified changes to the revenue-accounting system used by airlines across Southeast Asia, working in a Scrum team.
- Built a data-driven C# automation framework (Visual Studio Test) with SQL Server validation scripts, running daily in CI/CD as smoke and regression tests.

Application Developer Nov 2016 - Aug 2018

IBM | National Capital Region, Philippines

- Developed, maintained and supported COBOL business applications for clients, including production troubleshooting and root-cause analysis.

EDUCATION

Bachelor of Science in Computer Engineering, Bulacan State University 2011 - 2016
